***Reasons for Allowance***

1. Claims 1-20 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claim 1 limits the manufacture of an electronic device to forming a gate structure, an insulating layer on the gate structure so that the insulating layer has non-parallel sides, depositing a layer of semi-conductive material on the insulating material, electrode material on the semi-conductive material and negative resist material on the electrode material and using a beam at an angle, exposing the resist so that one surface is more exposed to the beam than another surface, leaving the less exposed surface soluble in a solvent and the more exposed surface insoluble, without the use of a mask to block radiation. This limitation, in combination with the other limitations of claim 1 is not taught or suggested by the prior art of record. Noguchi (US006461901B1) is silent as to use of a mask to block radiation in exposure of the resist, and does not teach or suggest that the side of the mask and its top surface may have different solubilities. Babcock (US006576536B1) teaches the use of angled radiation on resists, but does so to ablate the resist in select areas rather than create regions of different solubilities.

Claims 2-10 are allowed as being properly dependent upon allowed claim 1.

Art Unit: 2813

Claim 11 limits the manufacture of an electronic device to forming a gate structure on an insulating surface, so that the gate structure has non-parallel sides, depositing a resist material on the gate structure and using a beam at an angle (irradiating), exposing the resist so that one surface is more exposed to the beam than another surface, leaving the less exposed surface soluble in a solvent and the more exposed surface insoluble, without the use of a mask to block radiation. This limitation, in combination with the other limitations of claim 1 is not taught or suggested by the prior art of record. Noguchi (US006461901B1) does not teach or suggest that the side of the mask and its top surface may have different solubilities. Babcock (US006576536B1) teaches the use of angled radiation on resists, but does so to ablate the resist in select areas rather than create regions of different solubilities.

Claims 12-16 are allowed as being properly dependent upon allowed claim 11.

Claim 17 limits the manufacture of an electronic device to forming structure and resist material on the structure and using a beam at an angle (so that the angle is different on the first and second surfaces), exposing the resist so that one surface is more exposed (a different amount of radiation from the same beam) to the beam than another surface, leaving the one surface soluble in a solvent and the other surface insoluble, without the use of a mask to block radiation. This limitation, in combination with the other limitations of claim 1 is not taught or suggested by the prior art of record. Noguchi
